

Java

```
class Solution {  
    public int findWinningPlayer(int[] skills, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} skills  
 * @param {number} k  
 * @return {number}  
 */  
var findWinningPlayer = function(skills, k) {  
  
};
```

TypeScript

```
function findWinningPlayer(skills: number[], k: number): number {  
  
};
```

C++

```
class Solution {  
public:  
    int findWinningPlayer(vector<int>& skills, int k) {
```

```
}  
};
```

C#

```
public class Solution {  
    public int FindWinningPlayer(int[] skills, int k) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun findWinningPlayer(skills: IntArray, k: Int): Int {  
  
    }  
}
```

Go

```
func findWinningPlayer(skills []int, k int) int {  
  
}
```
